Faces of Science: José Olivares

March 4, 2015

How things work drives José to discovery

José Olivares has always been intrigued by disciplines like math, chemistry and physics, but his greatest passion has been figuring out how things work, particularly machines.

1:53

He continued to learn about electricity, vacuum systems, computers, and signals much like he did at a young age, empirically through tinkering and experimentation.

His research passion has been in developing advanced mass spectrometers, which help scientists understand the structure of molecules and how they are held together.

Olivares works for B-DO's Bioscience group.
